### When?

Date: 14/02/2022  
Time: 1015hrs

### Incident Description

Boilermaker sustained a laceration on his left shin after he hit the edge of the steel platform at the workshop.

### Body part / Nature of Damage

Left leg (Shin)

### Preliminary Findings?

- The injured was not paying attention to where he was stepping while trying to climb the platform to collect the hammer.
- Lack of preparation for the task as tools required to complete the task were out of reach.

## Corrective & Preventative Measures

1. Activity was stopped immediately
2. Incident was reported to relevant authorities
3. The injured was taken to the clinic.
