

ENVIRONMENTAL TOPIC - MARCH 2024

BEWARE OF SNAKES!!

Snouted/Egyptian Cobra

African Rock Python

Notes

- Due to high temperatures and heat waves experienced, snakes seek refuge in cooler places like inside homesteads.
- To prevent snakes from entering homesteads the following safety tips can help; clear vegetation, avoid leaving doors open for fresh air, open windows with gauze, and avoid accumulation of scrap materials.
- If you encounter a snake, keep calm and move slowly away from the snake, do not make sudden movements.
- If bitten, do not attempt to kill the snake, rather take a picture from a safe distance as this will assist with identification of the snake at the hospital/clinic.

“Snakes are part of our ecosystem; do not kill them”
